AI Questions

Plain-English answers for anyone curious about AI.

New to AI? Start here

AI tools like ChatGPT, Claude and Copilot are chat assistants. You type a request in plain English and they write back.

They can draft, summarize, explain and brainstorm. Think of one as a fast, eager helper, **not** an expert who is always right.

Tip: pick one small, everyday task, like tidying an email, and try it this week.

Questions about AI

Is it always right?
No. It can sound confident and still be wrong. Double-check facts, numbers and names.

Is it free?
Many tools have a free tier. Paid plans add features and higher limits.

Will it take my job?
It speeds up tasks. People who learn to use it well get the most out of it.

How to use AI: 4 simple steps

1 Say what you want
Describe the task and why you need it.

2 Add context
Who it's for, the tone, the length.

3 Follow up
Ask it to shorten, simplify or try again.

4 Check it
Read and edit before you use or send it.

TRY THIS PROMPT
"Write a friendly, professional 3-sentence email telling a customer their desk delivery is scheduled for Thursday morning."

AI is great for

- Drafting and polishing emails
- Summarizing long documents
- Brainstorming ideas and names
- Explaining unfamiliar topics simply
- Turning rough notes into clear text

Use with care

- Don't paste confidential, customer or personal details into a tool unless it's approved for that.
- Verify anything important: prices, dates, legal, medical or financial points.
- Never send AI-written text without reading it first.

Still have questions? Just ask.
